Multiplying and Dividing Integers

ESSENTIAL QUESTION

How can you use multiplication and division of integers to solve real-world problems?

LESSON 2.1 Multiplying Integers

LESSON 2.2 Dividing Integers

LESSON 2.3 Applying Integer Operations

Real-World Video

The giant panda is an endangered animal. For some endangered species, the population has made a steady decline. This can be represented by multiplying integers with different signs.

Visualize Vocabulary

Use the 🗸 words to complete the chart. You may put more than one word in each box.

Vocabulary

Review Words

- ✓ divide (dividir)
- ✓ dividend (dividendo)
- divisor (divisor) integers (enteros)
- multiply (multiplicar) negative number (número negativo)
 - operation (operación) opposites (opuestos) positive number (número positivo)
- ✓ product (producto)
- ✓ quotient (cociente)

Understand Vocabulary

Complete the sentences using the review words.

- 1. A ______ is a number that is less than 0. A ______ is a number that is greater than 0.
- 2. Division problems have three parts. The part you want to divide into groups is called

the _____. The number that is divided into another number is called

the _____. The answer to a division problem is called the _____.

3. _____ are all whole numbers and their opposites.

Active Reading

Double-Door Fold Create a double-door fold to help you understand the concepts in this module. Label one flap "Multiplying Integers" and the other flap "Dividing Integers." As you study each lesson, write important ideas under the appropriate flap. Include information that will help you remember the concepts later when you look back at your notes.

Multiplication Facts

EXAMPLES	$7 \times 9 =$ $7 \times 9 = 63$ $12 \times 10 =$ $12 \times 10 = 120$	Use patterns. When you multiply 9 by a number 1 through 9, the digits of the product add up to 9. 6+3=9 Products of 10 end in 0.

Multiply.

1.	9 × 3	2.	7 × 10	3.	9 × 8	4.	15 × 10
5.	6 × 9	6.	10 × 23	7.	9 × 9	8.	10 × 20

Division Facts

EXAMPLE	48 ÷ 6 =	Think: 6 times what number equals 48?
		$6 \times 8 = 48$
	$48 \div 6 = 8$	So, 48 ÷ 6 = 8

Divide.

9.	54÷9	10.	42÷6	11.	24÷3	12.	64÷8
13.	90÷10	14.	56÷7	15.	81÷9	16.	110÷11

Order of Operations

32 - 2(10 - 7) ²	
$32 - 2(3)^2$	To evaluate, first operate within parentheses.
32 - 2(9)	Next, simplify exponents.
32 — 18	Then multiply and divide from left to right.
14	Finally add and subtract from left to right.
	$32 - 2(10 - 7)^2$ $32 - 2(3)^2$ 32 - 2(9) 32 - 18 14

Evaluate each expression.

17.	12 + 8 ÷ 2	18.	$15 - (4 + 3) \times 2$	19.	18 - (8 - 5) ²
20.	6 + 7 × 3 - 5	21.	$9 + (2^2 + 3)^2 \times 2$	22.	$6+5-4 \times 3 \div 2$

Are **VOU Ready?** (cont'd)

Complete these exercises to review skills you will need for this module.

Multiplication Facts

- **23.** A chef ordered 400 pounds of potatoes in same-sized bags. Which expressions show the number of bags and number of pounds of potatoes per bag the chef may have ordered? Choose all that apply.

Division Facts

24. Josh has 36 postcards from national parks he visited. He wants to put them in a binder. Each page in the binder holds 4 postcards. How many pages does he need for the binder? Explain.

Order of Operations

25. A coach bought 3 soccer balls on sale. They normally sell for \$26 each. They were on sale for \$7 off the original price. The total tax on the balls was \$4. The expression 4 + 3(26 - 7) can be used to find the total amount the coach paid. Tell why the expression represents the total amount paid. Then explain how to use the order of operations to find the total amount the coach paid for the soccer balls.

7.1.2.1

integers.

Students will multiply

2(-3) means (_____) + (_____). Show this on the number line.

Lisa has a score of _____ .

Reflect

1. What do you notice about the product of two integers with different signs?

EXPLORE ACTIVITY 2

Modeling Integer Multiplication

Counters representing positive and negative numbers can help you understand how to find the product of two negative integers.

Reflect

- 2. What do you notice about the sign of the product of two negative integers?
- 3. Make a Conjecture What can you conclude about the sign of the product of two integers with the same sign?

Multiplying Integers

The product of two integers with opposite signs is negative. The product of two integers with the same sign is positive. The product of 0 and any other integer is 0.

28.	Multiple Representations The product of three integers is –3. Determine all of the possible values for the three factors.	
29.	Analyze Relationships When is the product of two nonzero integers less than or equal to both of the two factors?	ishing Company
30.	Justify Reasoning The sign of the product of two integers with the same sign is positive. What is the sign of the product of three integers with the same sign? Explain your thinking.	loughton Mifflin Harcourt Publ
		Ō

	2.2 Dividing Integers	7.1.2.2 Students will divide integers.
	ESSENTIAL QUESTION How do you divide integers?	
	EXPLORE ACTIVITY Regi	
	 A diver needs to descend to a depth of 100 feet. She wants to do it in 5 equal descents. How far should she travel in each descent? A Use the number line at the right to find how far the diver should travel in each of the 5 descents. 	0 ↑ -10 + -20 +
	B To solve this problem, you can set up a division problem: $\frac{-100}{0} = ?$ C Rewrite the division problem as a multiplication problem. Think: Some number multiplied by 5 equals -100. $\times ? = -100$	-30 - -40 - -50 - -60 - -70 - -80 -
	Remember the rules for integer multiplication. If the product is negative, one of the factors must be negative. Since is positive, the unknown factor must be positive / negative.	-90 + -100 + -110 +
ishing Company	E You know that $5 \times \underline{\qquad} = 100$. So, using the rules for integer multiplication you can say that $5 \times \underline{\qquad} = -100$. The diver should descend <u></u> feet in each descent.	
n Mifflin Harcourt Publi:	F Use the process you just learned to find each of the quotients below. $\frac{14}{-7} = \underline{\qquad} \qquad \frac{-36}{-9} = \underline{\qquad} \qquad \frac{-55}{11} = \underline{\qquad} \qquad \frac{-45}{-5} = \underline{\qquad}$	
© Houghto	 Keriect Make a Conjecture Make a conjecture about the quotient of two integers with different signs. Make a conjecture about the quotient of two integers with the same sign. 	

Dividing Integers

You used the relationship between multiplication and division to make conjectures about the signs of quotients of integers. You can use multiplication to understand why division by zero is not possible.

Think about the division problem below and its related multiplication problem.

 $5 \div 0 = ?$ $0 \times ? = 5$

The multiplication sentence says that there is some number times 0 that equals 5. You already know that 0 times any number equals 0. This means division by 0 is not possible, so we say that division by 0 is undefined.

My Notes

EXAMPLE 1

YOUR TURN

Find each quotient.

2. $0 \div (-6)$ **3.** $38 \div (-19)$ **4.** $-13 \div (-1)$

C Houghton Mifflin Harcourt Publishing Company

Using Integer Division to Solve Problems

You can use integer division to solve real-world problems. For some problems, you may need to perform more than one step. Be sure to check that the sign of the quotient makes sense for the situation.

EXAMPLE 2

Jake answers questions in two different online Olympic trivia quizzes. In each quiz, he loses points when he gives an incorrect answer. The table shows the points lost for each wrong answer in each quiz and Jake's total points lost in each quiz. In which quiz did he have more wrong answers?

STEP 1 Find the number of incorrect answers in the winter quiz.

- $-33 \div (-3) = 11$ Divide the total points lost by the number of points lost per wrong answer.
- **STEP 2** Find the number of incorrect answers Jake gave in the summer quiz.

 $-56 \div (-7) = 8$

Divide the total points lost by the number of points lost per wrong answer.

STEP 3 Compare the numbers of wrong answers.

11 > 8, so Jake had more wrong answers in the winter quiz.

YOUR TURN

0

5. A penalty in Meteor-Mania is -5 seconds. A penalty in Cosmic Calamity is -7 seconds. Yolanda had penalties totaling -25 seconds in a game of Meteor-Mania and -35 seconds in a game of Cosmic Calamity. In which game did Yolanda receive more penalties? Justify your answer.

Math Talk

Mathematical Processes

What is the sign of each

quotient in Steps 1 and 2? Why does this make sense

for the situation?

Guided Practice

Find each quotient. (Example 1)

1.	<u>-14</u>	2.	21 ÷ (-3)
3.	<u>26</u> -13	4.	0 ÷ (-4)
5.	<u>-45</u> -5	6.	-30 ÷ (10)
7.	<u>-11</u> -1	8.	−31 ÷ (−31)
9.	<u>0</u> -7	10.	<u>-121</u> -11
11.	84 ÷ (-7)	12.	<u>500</u> -25
13.	_6 ÷ (0)	14.	<u>-63</u> -21

Write a division expression for each problem. Then find the value of the expression. (Example 2)

- **15.** Clark made four of his truck payments late and was fined four late fees. The total change to his savings from late fees was -\$40. How much was one late fee?
- **16.** Jan received -22 points on her exam. She got 11 questions wrong out of 50 questions. How much was Jan penalized for each wrong answer?
- 17. Allen's score in a video game was changed by -75 points because he missed some targets. He got -15 points for each missed target. How many targets did he miss?
- **18.** Louisa's savings change by -\$9 each time she goes bowling. In all, it changed by -\$99 during the summer. How many times did she go bowling in the summer?

ESSENTIAL QUESTION CHECK-IN

19. How is the process of dividing integers similar to the process of multiplying integers?

2.2 Independent Practice

- 20. Walter buys a bus pass for \$30. Every time he rides the bus, money is deducted from the value of the pass. He rode 12 times and \$24 was deducted from the value of the pass. How much does each bus ride cost?
- **21. Analyze Relationships** Elisa withdrew \$20 at a time from her bank account and withdrew a total of \$140. Francis withdrew \$45 at a time from his bank account and withdrew a total of \$270. Who made the greater number of withdrawals? Justify your answer.

- **22.** Multistep At 7 p.m. last night, the temperature was 10° F. At 7 a.m. the next morning, the temperature was -2° F.
 - **a.** By how much did the temperature change from 7 p.m. to 7 a.m.?
 - **b.** The temperature changed by a steady amount overnight. By how much did it change each hour?
- **23.** Analyze Relationships Nola hiked down a trail at a steady rate for 10 minutes. Her change in elevation was –200 feet. Then she continued to hike down for another 20 minutes at a different rate. Her change in elevation for this part of the hike was –300 feet. During which portion of the hike did she walk down at a faster rate? Explain your reasoning.

24. Write a real world description to fit the expression $-50 \div 5$.

25. Communicate Mathematical Ideas Two integers, *a* and *b*, have different signs. The absolute value of integer *a* is divisible by the absolute value of integer *b*. Find two integers that fit this description. Then decide if the product of the integers is greater than or less than the quotient of the integers. Show your work.

Determine if each statement is true or false. Justify your answer.

26. For any two nonzero integers, the product and quotient have the same sign.

27. Any nonzero integer divided by 0 equals 0.

OT FOCUS ON HIGHER ORDER THINKING

- **28. Multi-step** A perfect score on a test with 25 questions is 100. Each question is worth the same number of points.
 - a. How many points is each question on the test worth?
 - **b.** Fred got a score of 84 on the test. Write a division sentence using negative numbers where the quotient represents the number of questions Fred answered incorrectly.
- **29.** Persevere in Problem Solving Colleen divided integer *a* by -3 and got 8. Then she divided 8 by integer *b* and got -4. Find the quotient of integer *a* and integer *b*.
- **30.** Justify Reasoning The quotient of two negative integers results in an integer. How does the value of the quotient compare to the value of the original two integers? Explain.

Work Area

2.3 Applying Integer Operations

7.1.2.3

Students will use integer operations to solve real-world problems.

ESSENTIAL QUESTION

How can you use integer operations to solve real-world problems?

Using the Order of Operations with Integers

The order of operations applies to integer operations as well as positive number operations. Perform multiplication and division first, and then addition and subtraction. Work from left to right in the expression.

EXAMPLE 1 Problem

Hannah made four withdrawals of \$20 from her checking account. She also wrote a check for \$215. By how much did the amount in her checking account change?

Analyze Information

You need to find the total *change* in Hannah's account. Since withdrawals and writing a check represent a decrease in her account, use negative numbers to represent these amounts.

Formulate a Plan

Write a product to represent the four withdrawals.

-20 + (-20) + (-20) + (-20) = 4(-20)

Add -215 to represent the check that Hannah wrote.

4(-20) + (-215)

Solve

Evaluate the expression to find by how much the amount in the account changed.

4(-20) - 215 = -80 - 215	Multiply first.
= -295	Then subtract.

The amount in the account decreased by \$295.

Justify and Evaluate

The value -295 represents a decrease of 295 dollars. This makes sense, since withdrawals and writing checks remove money from the checking account.

- 1. Reggie lost 3 spaceships in level 3 of a video game. He lost 30 points for each spaceship. When he completed level 3, he earned a bonus of 200 points. By how much did his score change?
- **2.** Simplify: -6(13) 21 _____

Using Negative Integers to Represent Quantities

You can use positive and negative integers to solve problems involving amounts that increase or decrease. Sometimes you may need to use more than one operation.

EXAMPLE 2 Real

Three brothers each have their own savings. They borrow \$72 from their parents for concert tickets. Each brother must pay back an equal share of this amount. Also, the youngest brother owes his parents \$15. By how much will the youngest brother's savings change after he pays his parents?

- STEP 1
 - Determine the signs of the values and the operations you will use. Write an expression.

Since the money is being paid back, it will *decrease* the amount in each brother's savings. Use -72 and -15.

Since an *equal share* of the \$72 will be paid back, use division to determine 3 equal parts of -72. Then add -15 to one of these equal parts.

Change to youngest brother's savings = $(-72) \div 3 + (-15)$

Evaluate the expression.

$(-72) \div 3 + (-15) = -24 + (-15)$	Divide.
= -39	Add.

The youngest brother's savings will decrease by \$39.

Reflect

ò

3. What If? Suppose there were four brothers in Example 2. How much would the youngest brother need to pay?

Math Talk Mathematical Processes

Suppose the youngest brother has \$60 in savings. How much will he have left after he pays his parents what he owes?

Simplify each expression.

- **4.** (-12) ÷ 6 + 2 _____ **5.** $-87 \div (-3) - 9$
- **6.** $40 \div (-5) + 30$

Math On the Spo

absolute values in Step 2?

my.hrw.com

Comparing Values of Expressions

Often, problem situations require making comparisons between two values. Use integer operations to calculate values. Then compare the values.

Real EXAMPLE 3

Jill and Tony play a board game in which they move counters along a board. Jill moves her counter back 3 spaces four times, and then moves her counter forward 6 spaces. Tony moves his counter back 2 spaces three times, and then moves his player forward 3 spaces one time. Find each player's overall change in position. Who moved farther?

Math Talk STEP 1 Find each player's overall change in position. **Mathematical Processes** Jill: 4(-3) + 6 = -12 + 6 = -6 Jill moves back 6 spaces. Why do you compare Tony: 3(-2) + 3 = -6 + 3 = -3 Tony moves back 3 spaces. STEP 2 Compare the numbers of spaces moved by the players. |-6| > |-3|Compare absolute values.

Jill moves farther back than Tony.

C Houghton Mifflin Harcourt Publishing Company

YOUR TURN

ò

8. Amber and Will are in line together to buy tickets. Amber moves back by 3 places three times to talk to friends. She then is invited to move 5 places up in line. Will moved back by 4 places twice, and then moved up in line by 3 places. Overall, who moved farther back in line?

Evaluate each expression. Circle the expression with the greater value.

9. $(-10) \div 2 - 2 =$ **10.** $42 \div (-3) + 9 =$ $(-36) \div 9 - 2 =$ _____ $(-28) \div 4 + 1 =$ _____

MODULE 2 MIXED REVIEW Assessment Readiness

Selected Response

- A diver is at an elevation of -18 feet relative to sea level. The diver descends to an undersea cave that is 4 times as far from the surface. What is the elevation of the cave?
 - (**A**) −72 feet
 - **B** −22 feet
 - ⑦ −18 feet
 - **(D)** −14 feet
- **2.** The football team lost 4 yards on 2 plays in a row. Which of the following could represent the change in field position?
 - (A) –12 yards
 - B –8 yards
 - \bigcirc -6 yards
 - D –2 yards
- **3.** Clayton climbed down 50 meters. He climbed down in 10-meter intervals. In how many intervals did Clayton make his climb?
 - **A** 5
 - **B** 10
 - **(C)** 40
 - **D** 500
- **4.** Which expression results in a negative answer?
 - a negative number divided by a negative number
 - (B) a positive number divided by a negative number
 - © a negative number multiplied by a negative number
 - a positive number multiplied by a positive number

5. Clara played a video game before she left the house to go on a walk. She started with 0 points, lost 6 points 3 times, won 4 points, and then lost 2 points. How many points did she have when she left the house to go on the walk?

(A) −20 (C)	12
---------------------------	----

- **B** −16 **D** 20
- 6. Which expression is equal to 0?

(A)
$$\frac{-24}{6} - 4$$

(B) $\frac{-24}{-6} + 4$
(C) $\frac{24}{6} + 4$
(D) $\frac{-24}{6} - 4$

Mini-Task

- Rochelle and Denae started with the same amount of money in their bank accounts. Rochelle made three withdrawals of \$25 and then wrote a \$100 check. Denae deposited \$5 and then wrote a \$200 check.
 - **a.** Find the total change in the amount of money in Rochelle's account.
 - **b.** Find the total change in the amount of money in Denae's account.
 - c. Compare the amounts of money the two women have in their accounts now.
