#### **PHYSICAL INFORMATION**

#### **Dear Parent or Guardian:**

Enclosed is an information packet for your child's sport's history and physical examination. The actual physical examination will be required every other year, (i.e. 9<sup>th</sup> and 11<sup>th</sup> grades). The purpose of this exam is to detect any conditions that may increase your child's risk of injury or death while practicing or competing in his or her sport. Although there are many beneficial aspects of participating in high school sports (improved self-image, self-motivation and health habits), as with any activity there are some associated risks. Overall, the risk of death in high school sports is extremely low; fewer high school students die due to their sports each year than in automobile accidents. In recent years there has been an average of 20 to 40 non-traumatic deaths in high school sports each year, or one per 100,000 to 200,000 student athletes per year.

The major causes of non-traumatic deaths in sports are heart problem, with a syndrome called "Hypertrophic Cardiomyopathy (HCM)" being the most common. Fortunately, not all athletes with HCM are at risk for sudden death. Our goal is to identify those student-athletes who may be at risk. Currently, the method for doing this is by having a physician perform a specific "Preparticipation Exam" (PPE). By taking the appropriate history and performing the appropriate physical, we can detect some of the student-athletes at risk for sudden death. Unfortunately, this is not a perfect system and some athletes with HCM will be missed and many others without HCM or other heart problems will be referred for other tests, which will turn out to be normal.

Other parts of the history and physical focus on areas that may not lead to death but are more commonly associated with problems. The musculoskeletal and neurologic history and exam is critical in detecting old injuries or other problems that need special attention in order to prevent future injuries.

The final role of the PPE is to provide the student-athletes with a chance to ask a physician health related questions and receive some health counseling. While this exam is very limited and should not replace a regular visit to his or her personal doctor, the limited contact that young adults have with doctors is a recognized fact. Therefore, this provides a much needed opportunity for young athletes to have contact with a physician.

We hope that this letter explains some of the reasons that this history and physical is so important and we urge you to take the time to complete the history form carefully.

## **EXPLAIN "YES" ANSWERS BELOW. CIRCLE QUESTIONS YOU DON'T KNOW THE ANSWERS TO.** YES NO Do you have a chronic medical condition (asthma, diabetes, high blood 1. pressure, etc.)? 2. Have you ever been hospitalized overnight? 3. Are you currently taking any prescriptions or non-prescriptions (over-thecounter) medications or pills or using an inhaler? 4. Do you have any allergies (for example, to pollen, medicine, food, or stinging insects)? 5. a. Have you passed out or been dizzy during exercise? b. Have you had chest pain (or pressure) with exercise? c. Have you had excessive unexplained shortness of breath or fatigue with exercise? d. Is there a family history of premature death or morbidity from cardiovascular disease in a relative younger than age 50? e. Is there a history in your family of hypertrophic cardiomyopathy, dilated cardiomyopathy long QT syndrome or Marfan's syndrome? Has a physician denied or restricted your participation in sports for any f. heart problem? 6. Do you have any current skin problems (for example, itching, rashes, acne, warts, fungus or blisters)? 7. a. Have you had a head injury or concussion? b. Have you been knocked out, become unconscious, or lost your memory? c. Have you had a seizure? Do you have frequent or severe headaches? d. Have you had numbness or tingling in your arms, hands, legs, or feet? e. 8. Have you become ill from exercising in the heat?

9. Do you cough, wheeze, or have trouble breathing during or after activity?

#### **Dear Health Practitioner:**

Enclosed is the revised Nevada Interscholastic Activities Association (NIAA) packet for High School Preparticipation Physical Evaluations (PPE's). You will notice that the form we are using incorporates recommendations from the Second PPE Task Force (1997)(supported by the AAFP, AAP, AMSSM, AOSM and AOASM) and separately from the AHA. We anticipate that this form will be reviewed every few years and we will keep you apprised of any changes. Also, for young athletes with known cardiovascular abnormalities, we recommend following the guidelines of the 26th Bethesda Conference. We recommend you reference the Task Force monograph, the AHA recommendations or the 26th Bethesda Conference before performing high school athletic physicals in Nevada.

While many of you have been performing these evaluations for years, we would like to bring your attention to a few points. As discussed in the introduction to the monograph, there are multiple reasons for performing PPE's; the foremost reasons are to prevent injury and sudden cardiac death.

It is estimated that between 1 and 2 deaths (predominantly cardiovascular in etiology) per 200,000 high school athletes occur per year. The prevalence of cardiovascular disease capable of causing sudden cardiac death in these athletes is around 1/20,000. The most common cause of cardiac death in this population is hypertrophic cardiomyopathy (HCM).

Since the vast majority of PPE's will be completely normal, and, conversely, most students with abnormalities on history or physical exam do NOT have significant cardiac pathology, extreme diligence is required when performing these exams so that the few students with serious conditions are not missed.

# ANSWERS ON THE HISTORY FORM THAT WOULD SUGGEST A NEED FOR A CARDIOLOGY CONSULTATION INCLUDE:

- Excessive shortness of breath, syncope or chest pain during exercise.
- Family history of premature death or cardiovascular morbidity. (Before age 50)
- Family history of HCM, dilated cardiomyopathey, long QT syndrome, or Marfan's syndrome.

#### ABNORMALITIES ON THE PHYSICAL EXAM THAT SUGGEST THE NEED FOR ECHOCARDIOGRAPHY OR CARDIAC CONSULTATION INCLUDE:

- Any systolic murmur greater than II/VI.
- Any diastolic murmur.
- A murmur that increases in intensity from supine to standing (suggests HCM).
- Stigmata of Marfan's syndrome. (Attachment 7).

A second goal of the PPE is to detect chronic illnesses or old injuries that may hamper the athlete's performance (such as Exercise Induced Asthma) or lead to injury ("the most common cause of injury is reinjury").

The final goal of the PPE is to provide our young athletes with a chance to talk to a physician about health issues. While this exam does not replace ongoing care by a personal physician, it may be the only contact these students have. Therefore, a brief discussion of health issues such as breast and testicular cancer screening, alcohol and tobacco use, automobile safety, etc., may be appropriate during the PPE.

Thank you for your willingness to help ensure a safer future for Nevada's young athletes.

Attachment 7

Suggested Screening Format for Marfan's Syndrome

Screen all men over 6 feet and all women over 5 feet 10 inches in height with echocardiogram and slit lamp examination when any two of the following are found:

- 1. Family History of Marfan's syndrome\*
- 2. Cardiac murmur or mid-systolic click
- 3. Kyphoscoliosis
- 4. Anterior thoracic deformity
- 5. Arm span greater than height
- 6. Upper to lower body ration more than one standard deviation below the mean
- 7. Myopia
- 8. Ectopic lens

\*This finding alone should prompt further investigation.
