5.0 Operations with Polynomials (After Unit 3 Test)

Examples: Simplify the following expressions.

1)
$$-2 + 3(t^2 - 6t + 2) + (5t^2 - t - 8) - (6t + 1)$$

2)
$$20 - \frac{1}{2}(-6t^2 + 8t - 3) - 3(t^2 - 6t + 5) + (t - 3)$$

3) Subtract:
$$5z^2 - z + 3$$
 from $4z^2 + 9k - 12$

4) Subtract:
$$-3k^2 + 6k$$
 from $5k^2 - k - 4$

5)
$$-2(x+3)(3x^2-2x+4)$$

Honors Algebra 2

Chapter 5 Student Notes

6)
$$5(x^2+4)(-3x^2-8x-1)$$

7)
$$(x-5)(x+2)(3x-1)$$

8)
$$(2x-1)(x+4)(x-1)$$

9)
$$2x(x-7)^2(x+3)$$

10) $5x^2(x+3)^2(2x-3)$

Honors Algebra 2 Chapter 5 Student Notes

11)Write a polynomial to represent the volume of a cylinder with a radius of (3x - 2) inches and a height of (x + 5) inches. Leave your answer in terms of pi.

12) Write a polynomial to represent the volume of a cone with a radius of (x + 6) inches and a height of (2x - 1) inches. Leave your answer in terms of pi. (hint: volume of a cone is one third the base times the height)

5.1 Notes: Factoring and Solving Polynomials

13) You are designing a marble planter for a city park. You want the length of the planter to be six times the height and the width to be three times the height. The sides should be one foot thick. Because the planter will be on the sidewalk, it does not need a bottom. What should the outer dimensions of the planter be if it is to hold 4 cubic feet of dirt?

5.3 Reading: The Rational Zeros Theorem

Roots of a Polynomial

A root or zero of a function is a number that, when plugged in for the variable, makes the function equal to zero. Thus, the roots of a polynomial f(x) are values of x such that f(x) = 0.

The Rational Zeros Theorem

The Rational Zeros Theorem states:

If f(x) is a polynomial with integer coefficients and if $\frac{p}{q}$ is a zero of f(x), then p is a factor of the constant term of f(x) and q is a factor of the leading coefficient of f(x).

We can use the Rational Zeros Theorem to find [*a list of all the possible*] rational zeros of a polynomial. Here are the steps:

- 1. Arrange the polynomial in descending order
- 2. Write down all the factors of the constant term. These are all the possible values of p.
- 3. Write down all the factors of the leading coefficient. These are all the possible values of q.
- 4. Write down all the possible values of $\frac{p}{q}$. Remember that since factors can be negative, $\frac{p}{q}$ and $-\frac{p}{q}$ must both be included. Simplify each value and cross out any duplicates.
- 5. Use synthetic division to determine the values of $\frac{p}{q}$ for which $f(\frac{p}{q}) = 0$. These are all the rational roots of f(x).

Example: Find all the rational zeros of f(x) given below.

$$f(x) = \frac{2x^4 + x^3 - 19x^2 - 9x + 9}{\sqrt{q}}$$

Factors of constant term (\mathbf{p}) : ± 1 , ± 3 , ± 9 . Factors of leading coefficient (\mathbf{q}) : ± 1 , ± 2 . Possible values of $\frac{p}{q}$: $\pm \frac{1}{1}$, $\pm \frac{1}{2}$, $\pm \frac{3}{1}$, $\pm \frac{3}{2}$, $\pm \frac{9}{1}$, $\pm \frac{9}{2}$. These can be simplified to: ± 1 , $\pm \frac{1}{2}$, ± 3 , $\pm \frac{3}{2}$, ± 9 , $\pm \frac{9}{2}$.

Use synthetic division to try some of the possible factors:

1	2 1 -19 -9 9 2 3 -16 -25	-1	2	1 -2	-19 1	-9 18	9 -9	1/2	2	1 1	-19 1	-9 -9	9 -9
	2 3 -16 -25 -16		2	-1	-18	9	0		2	2	-18	-18	0
Remainder = -16. Not a zero.			Remainder = 0. Is a zero.				Remainder = 0			er = 0.	ls a zero.		
-1/2	2 1 -19 -9 9 -1 0 19/2 -1/4	3	2	1	-19 21	-9	9	-3	2	1	-19	-9	9
				<u> </u>	21	•	-5			-6	15	12	-9
	2 0 -19 1/2 35/4		2	7	2	-3	0		2	-5	-4	3	0
	Remainder = $35/4$. Not a zero.	etc.	Remainder = 0. Is a zero.				Remainder = 0. Is a zero						

By the Fundamental Theorem of Algebra, this degree 4 polynomial has four roots, and so no other possible values need to be checked. Thus, the rational roots of f(x) are x = -1, $\frac{1}{2}$, -3, and 3. An easier way to solve this problem is, after finding one rational root, attempt to factor the declining polynomial to find the other roots.

5.4 Notes: Exploring Key Features of Polynomials

Polynomial Function Families					
Linear	Quadratic				
Cubic	Quartic				

End Behavior

If we know the degree and leading coefficient of a polynomial, then we can get a general idea of what the graph would look like. End behavior describes what happens to the range as x goes to infinity and negative infinity.

Honors Algebra 2 Chapter 5 Student Notes

Examples: Describe the end behavior of the graph of the polynomial functions:

1)
$$f(x) = -2x^2 + 5x^4 - 3x + 7$$

2)
$$f(x) = (5x - 3 - 8x^5 + 12x^2)(3x^4 - 1)$$

3) Create a function that has the following end behavior:

as $x \to -\infty$, $f(x) \to -\infty$ and as $x \to \infty$, $f(x) \to \infty$

Increasing and Decreasing

We describe the intervals where a function is either increasing or decreasing using the ____- values in interval notation.

Highlight where the function is increasing. Describe the sections in interval notation.

Highlight where the function is decreasing. Describe the section in interval notation.

Chapter 5 Student Notes

Example: Describe the end behavior of the following function as well as the intervals where the function is increasing and decreasing.

For which x-values is the function positive?

For which x-values if the function negative?

Key Features

Example: Identify the key features of the function graphed below.

x-intercepts:

Honors Algebra 2

y-intercept:

Local (relative) Maximum:

Absolute Maximum:

Local (relative) Minimum:

Graphing Cubic Functions in *h*, *k* form

 $y = a(x-h)^3 + k$

For all x in the domain, f(x) = f(-x) For all x in the domain, f(-x) = -f(x)

Example: Is f(x) odd, even, or neither?

(a) $f(x) = 4x^4 + 5$

(b)
$$f(x) = 2x^3 + 3x$$

Chapter 5 Student Notes

Example: Is f(x) odd, even, or neither?

Honors Algebra 2

5.6 Notes: Writing Polynomial Functions/Models/Systems

5) According to data from the U.S. Census Bureau for the period 2000-2007, the number of male students enrolled in high school in the United States can be approximated by the function $M(x) = -0.004x^3 + 0.037x^2 + .049x + 8.11$ where x is the number of years since 2000 and M(x) is the number of male students in the millions. The number of female students enrolled in high school in the United States can be approximated by the function $F(x) = -0.006x^3 + 0.029x^2 + 0.165x + 7.67$ where x is the number of years since 2000 and F(x) is the number of female students in millions. Estimate the total number of students enrolled in high school in the United States can be

Reflect: Explain how you can use the given information to estimate how many more male high school students than female high school students there were in the United States in 2007.
